Ibrahim Cartan

Seattle, WA | Ibrahim.Cartan@Outlook.com | github.com/IbrahimCart | ibrahimcartan.github.io

EDUCATION

University of Washington | *B.S., Computer Science and Systems; Minor in Business Administration* **Jun 2027**

South Seattle College | *Associate's, Computer Science and Systems* **Jun 2023**

SKILLS

- **Languages**: Java, Python, Swift, JavaScript, HTML/CSS, SQL (SQLite)
- **Tools & Frameworks**: SwiftUI, Xcode, Git, GitHub, GitHub CLI, GitHub Pages, Maven, JUnit, discord.py, REST APIs, FFmpeg, YouTrack, Epic
- **Practices**: Object-oriented design, MVC, unit testing, Agile/Scrum, debugging, user interviews, AI-assisted development (Claude Code)

TECHNICAL PROJECTS

AI GitHub Code Reviewer | Python, Claude Code, GitHub CLI | GitHub

- Built a command-line tool that reviews GitHub pull requests and git diffs with Claude Code in headless mode, reporting security issues, bugs, performance problems and missing tests, and posting them as inline PR review comments.
- Limited the model to one call with tools disabled and a JSON output schema; wrote Python validation that rejects findings citing files or lines absent from the diff and recomputes the verdict, plus exit codes for git hooks and CI.

Doses: iPhone Medication Reminder App | Swift, SwiftUI, iOS | GitHub

- Interviewed the end user, a family member taking medication twice daily, and built an iPhone app around her requirements: firmer repeat reminders after a missed dose, clear taken/late/missed status and a shareable history for her doctor.
- Separated scheduling and dose-status logic into a Swift package covered by 20 unit tests; used local notifications with an "I took it" action so the app works offline with no accounts or server.
- Observed her using it on her own phone and redesigned the Undo control after she could not find it; added customizable reminders (up to 8).

Discord Music Bot | Python, discord.py, yt-dlp, Spotify Web API, FFmpeg | GitHub

- Developed a Python Discord bot that streams music to voice channels through slash commands, including /play, /skip, /pause, /resume, /queue, and /stop.
- Designed a source-resolution pipeline that searches YouTube with automatic SoundCloud fallback and converts Spotify track, album, and playlist links into playable queues through the Spotify Web API.
- Implemented next-track prefetching to reduce wait time between songs; configured cross-platform operation on macOS and Windows with .env-based secret management.

Autonomous Drone Security Monitoring System | Java, SQLite, JUnit, Maven | Team Project

- Collaborated in an Agile team to build a Java application that monitors autonomous drone telemetry and detects flight anomalies.
- Contributed to the MVC architecture, telemetry generation, anomaly detection logic, and SQLite integration; wrote JUnit tests and used Git, Maven, and YouTrack for version control, builds, and sprint tracking.

Portfolio Websites | HTML, CSS, JavaScript, SVG, WebGL, GitHub Pages | ibrahimcartan.github.io

- Built and deployed two static sites with no framework: a professional portfolio and an interactive course portfolio whose map, cards and 3D globe render from a single data file; documented AI-assisted development in a public prompt log.

WORK EXPERIENCE

Conifer Health Solutions | *Patient Access Representative II* **Mar 2023 - Present**

- Register and verify patient, insurance, and demographic data in Epic while maintaining HIPAA-level confidentiality and accuracy.
- Resolve patient questions and coordinate with clinical staff to keep front-end operations on schedule.

Enterprise Holdings | *Car Detailer* **Jan 2021 - Mar 2023**

- Inspected vehicles before and after rentals, documenting damage and safety issues while meeting fast turnaround standards.

Allied Universal | *Security Officer* **Jun 2020 - Jan 2021**

- Patrolled facilities, responded to incidents, and wrote detailed reports for supervisors and emergency personnel; verified access credentials.

Som American Transport | *Truck Dispatcher* **Jun 2019 - May 2020**

- Tracked driver routes and schedules across multiple locations in real time, resolving delays and logging delivery updates.
